

FRACTURE

CASE STUDY

A fracture patient has improved
outcome following intervention with
Forté Fracture®

The following images are actual x-rays of a real patient. Following eleven months, two unsuccessful surgeries and an unsuccessful bone graft, the surgeon recommended Forté Fracture, a scientifically derived nutritional intervention to support fracture recovery.

March 4, 2015

- 71 Year old female suffers subtrochanteric femur fracture
- Post intra-medullary rod placement

August 17, 2015

- **5 months** post surgical repair
- Non-union: **permanent failure** of healing following surgery.

September 21, 2015

- **6 months** post primary surgical repair
 - **Still non-union**
- Status post secondary surgical correction – rod removed, plate and screws
- Salvage attempt with bone graft

November 2, 2015

- **8 months post fracture**, 2 months post secondary surgical correction
- Salvage attempt with bone graft not working
 - **Still non-union**

January 4, 2016

- **10 months post fracture**, 4 months post secondary surgical correction
 - 2 months post bone graft
 - **Bone graft failing**
 - Continued non-union

February 7, 2016

- **11 months post fracture**, 5 months post secondary surgical correction, 3 months post bone graft
 - **Continued non-union**

Patient begins supplementing with Forté Fracture nutritional shakes

April 11, 2016

**After 2 months of supplementation with
Forté Fracture Nutritional shakes**

HEALING FINALLY STARTS TO OCCUR

May of 2015 an elderly woman of 71 years old suffered a femur fracture due to a fall. After 11 months of extensive surgeries to assist in the recovery of her femur break, nothing was helping. Finally, her doctor turned to nutrition and the basics of supplementation for one last ditch approach. The results were miraculous. Just two months of proper nutrition and patience was the key to her success.

The power of nutrition is what assisted this woman in returning back to her normal life.
Take care of your body and it will take care of you.
